

**David Sifres Belenguer, Science Teacher
MSc Microbiology (first class), BSc Biology (Honours),
Chemistry Degree, PGCE**

At present I am teaching practical science, biology and physics within a range of courses tailored by the Open College Network (OCN) and Edexcel in a further education (FE) college located in one of the most diverse borough across London.

I have a master qualification on Microbiology, a First Class Honours Bachelor in Biology at Birkbeck College University of London, and a Chemistry Degree by UPV (Polytechnic University of Valencia). Additionally, I achieved the Professional Graduate Certificate in Education (PGCE) at Greenwich University where I acquired the teaching skills for the Lifelong Learning Sector.

Biology and general science have always interested me, with a specific passion on genetics, environmental conservation and ecology. I used to work overseas as an environmental consultant, applying and EMAS (Eco-Management and Audit Scheme) and ISO 14001 to enable different companies to achieve the required environmental legislation and other standards

My role within Equivalency Testing is to support students to achieve their GCSE qualifications in either Combined Science (biology, chemistry and physics) or general biology.

I have the responsibility for ensuring the high standards of teaching and learning, in particular supporting home study students with their homework and providing a constructive feedback.

From the initial concept of Equivalency Testing, to the present day I pride myself on the high standard of service we provide to all of our students their Universities and Employers
